

Business Management Software Provider

COMPANY OVERVIEW

This Software Provider supports more than 2.8 million customers in the United States and Canada. The company specializes in business management software and services for small and medium-sized businesses. The applications cover a full range of business requirements, including accounting, customer relationship management, contact management, human resources, and warehouse management.

BUSINESS & TECHNOLOGY CHALLENGES

The client needed to reinstall and correctly configure SharePoint which had been installed initially on a trial basis. When the trial was complete the company decided on Microsoft Office Sharepoint Server (MOSS) as the collaborative tool of choice for their new SAP project. Corus Consulting analyzed project requirements and needs for document management as the primary application for SharePoint. Other secondary requirements included workspace, template design, security, administration, graphics, and branding.

THE CORUS SOLUTION

Our consultants developed document management topology and templates for specific page and workspace layouts needed in the customer's overall MOSS environment. New workspace templates are automatically configured and provide the look and feel of the different areas of the environment.

MEASURABLE RESULTS

Corus Consulting provided templates for Team Pages, Steering Committee, and Business Expert. Now that these templates are consistent with the overall look and feel of the SharePoint environment's different areas, it is easier to create new workspaces and lists.

To create a list, site administrators can select a template from the Create List page. These templates include automatically configured workspace templates such as Issues, Risks, Decisions, Change Requests, Other Deliverables, SAP FIT/GAP, and RICE-FEW Objects.
