

Leading Media Company

COMPANY OVERVIEW

This Leading Media Company is a wholly and privately owned subsidiary of large Media Enterprise, providing digital cable television and telecommunications services in the United States. It is the fourth-largest cable television provider in the country, serving more than 6.7 million customers. The subscribers include 2.7 million for digital cable, 3.1 million for Internet access and 1.7 million for digital telephone. Corus worked with the team in Alpharetta, Georgia.

BUSINESS & TECHNOLOGY CHALLENGES

The company was in the process of moving from .NET to a Java-based application. As work was being completed on the application, which supported pay-per-view sign ups and payments, the company needed assistance in configuring and deploying a JBoss server infrastructure and testing the application in the new environment.

THE CORUS SOLUTION

After reviewing the production server deployment, our consultants recommended changes to the network topology. In addition, Corus helped with the new configuration and worked together with company administrators to set up Apache, Tomcat, JBoss Web and application servers in a clustered, load-balanced configuration.

Our consultants provided assistance with load testing of the application using Mercury LoadRunner and also helped deploy solutions to several critical areas that testing uncovered.

MEASURABLE RESULTS

The company successfully deployed a critical application by implementing Java as a server environment for development and production.

- PROJECT SPECS -

CLIENT:

LEADING MEDIA COMPANY

INDUSTRY:

MEDIA AND ENTERTAINMENT

- PROJECT DETAILS -

TECHNOLOGIES USED:

- Linux Server
- JBoss Application Server
- Apache Application Server
- Tomcat Application Server

SERVICES RENDERED:

- Application Development
- Load Testing
