

VT Griffin

COMPANY OVERVIEW

VT Griffin provides facilities management and technical support for the U.S. government and civilian customers, including the U.S. Department of Defense, U.S. Coast Guard, and NASA. The company has headquarters in Southampton UK and an office in Atlanta, GA.

BUSINESS & TECHNOLOGY CHALLENGES

VT Griffin needed a custom Adobe Flash CS2 training program that would help their employees make changes to their public web site. Their marketing specialist and senior graphic designer had an immediate need for an on-site, skilled instructor, to train their team how to use this application.

THE CORUS SOLUTION

Corus worked with VT Griffin to develop a training course tailored specifically to fit the client's needs. It involved four days of one-on-one, on-site training. The course covered all of the basics of the software and Corus was able to use the client's existing training site in order to provide a real world example. The client now has a custom training solution that allows their team to complete and upload files online efficiently. Their marketing specialist received a good working knowledge of the program and obtained the necessary skills to make any future critical updates to their site.

MEASURABLE RESULTS

Corus created a custom training course that was modified to suit the client's immediate needs. After four days of training, VT Griffin's marketing specialist and senior graphic designer gained the desired level of understanding in the application.

"Kevin was an exceptional teacher," said Christy Buechler, marketing specialist/senior graphic designer. "He really took the time to make sure I had an understanding of every aspect of the program and customized the training to best suit my needs in the workplace. I'm actually excited about having the opportunity to work in Flash now."
