

Federal Government Agency

COMPANY OVERVIEW

This division provides leadership in ensuring the health and care of animals and plants. It is also responsible for improving agricultural productivity and competitiveness and contributing to national economy and public health.

BUSINESS & TECHNOLOGY CHALLENGES

The division was using several sub-systems for status of funds tracking, reporting, and information analysis. The system could not handle large emergency incidents and day-to-day financial commitment tracking. The organization was running disparate applications in a non-secure environment that constantly generated duplicate entries and delayed data reporting and analysis.

THE CORUS SOLUTION

Our consultants developed a cost management system (ACMS) that provides real-time access to estimated and committed expenses handling small to large emergency incidents. The system provides the ability to analyze data, adjust relevant status of funds, and update agency spending and budgeting in real-time. The division could use the system beyond the scope of an emergency incident.

Corus developed a secure environment and reduced the number of disparate applications throughout the organization. ACMS provides the agency with a consistent, well-defined process that is flexible for all levels of the organization at any time during a financial cycle.

MEASURABLE RESULTS

As a result of the Corus engagement, the agency is now ready to complete emergency management financial tracking and reporting in a secure environment. The new system enhances communication of financial tracking through all levels of an incident. Having significantly reduced the number of sub-systems and required manual entries, the division now has greater access to reporting and information analysis and the ability to respond in an emergency incident.

The system has also improved worker productivity in emergency situations by eliminating the two-week setup time that was necessary with the agency's previous fund tracking system.
